

Cyber Threat Intelligence: Shut Down Risks Before They Escalate

Backed by the cybersecurity industry's leading dataset, Flare is the unified platform for security teams to quickly shut down external threats before they are exploited. It was built for the daily realities of SecOps, CTI, fraud teams, and security service providers, and designed for clarity, speed, and scale.

Founded by red teamers who understand the visibility gaps leaving organizations at risk, Flare delivers prioritized alerts for when your organization's data appears where it shouldn't – and resolve it before it becomes a bigger problem.

How Flare Works

The Differentiator

For more than eight years, we have been building a proprietary database that includes tens of billions of credentials and stealer logs:

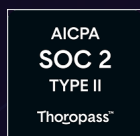

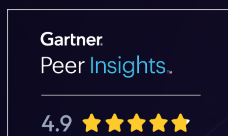

What Our Customers Have to Say

The difference with Flare is the fact that their intelligence is deeper and more detailed. Being able to produce malware logs, copies of data, data leaks — it's very powerful for us to have that visibility. There are very few vendors in the space able to do what Flare does.

- Senior Incident and Hunting Specialist, Consulting Firm
